Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-5 and 7 are rejected under 35 U.S.C. 102(e) as being anticipated by Ament (US 6,687,602). See col. 4, lines 52,67; col. 6, lines 1-27; and col. 2, lines 35-54.

Claim 9 is rejected under 35 U.S.C. 102(b) as being anticipated by Jordan (US 4,305,355). The calculation illustrated in the flow chart of Fig. 2 are adaptively modifying a vacuum threshold to vary the displacement of the variable displacement internal combustion engine.

Allowable Subject Matter

Claims 6,8 and 10 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. The reference by Matthews et al discloses method and apparatus for deactivating and reactivating cylinders for an engine with displacement on demand.
